2017 ANNUAL REPORT

South Carolina
ALZHEIMER’S DISEASE REGISTRY

ARNOLD SCHOOL OF PUBLIC HEALTH
UNIVERSITY OF SOUTH CAROLINA

As noted within, data included in this report covers January 1, 2013 through December 31, 2013, the most current years with available and comprehensive data.

In memory of Mrs. Carol Cornman  
Founding Director of the Office for the Study of Aging

Thank you for your unwavering commitment to improving the lives of South Carolina’s aging population.

You left fingerprints of grace on our lives.  
You shall not be forgotten!
ALZHEIMER’S DISEASE REGISTRY ANNUAL REPORT

We are pleased to present the 2017 Annual Report on the South Carolina Alzheimer’s Disease Registry. This report is issued by the Office for the Study of Aging at the University of South Carolina’s Arnold School of Public Health.

The following pages reflect the significant and multifaceted impact of Alzheimer’s disease on our state. This disease is estimated to affect 11% of the population of South Carolina aged 65 years and older and 44% of those over age 85. Caring for someone with dementia also imposes a major burden for caregivers and other family members.

The Alzheimer’s Disease Registry is one of only three statewide population-based registries of Alzheimer’s disease and related dementias (ADRD) in the United States and is the most comprehensive and active. Data have been collected on South Carolinians with ADRD since 1988. The Registry was established and is maintained by the Office for the Study of Aging with the invaluable support of the South Carolina Department of Health and Human Services and the Revenue and Fiscal Affairs Office. In this Annual Report you will also find a wide range of research, evaluations, programs, and training addressing the needs of older South Carolinians and their families.

The Office for the Study of Aging is proud to provide services that strive to improve the quality of life of our older adult population, their families and their caregivers. We hope you will visit our website at http://sph.sc.edu/osa.

If you have any questions about the Alzheimer’s Registry or our Office’s activities, please contact Dr. Maggi Miller, Registry Manager (803-777-0214 or chandlmj@mailbox.sc.edu).

Best Regards,

Daniela B. Friedman, MSc, PhD
Mindi Spencer, MA, PhD
Maggi C. Miller, MS, PhD
Joseph Lee Pearson, MS, DrPH

Associate Director of Research

Registry Manager

Office for the Study of Aging ■ Arnold School of Public Health ■ University of South Carolina
Executive Summary

The Office for the Study of Aging (OSA) at the Arnold School of Public Health of the University of South Carolina (USC), in cooperation with the South Carolina Department of Health and Human Services (SCDHHS), the South Carolina Department of Mental Health, the USC School of Medicine, and the South Carolina Revenue and Fiscal Affairs Office, maintains a statewide Registry of South Carolina residents diagnosed with Alzheimer’s disease and related dementias (ADRD).

This report is published in fulfillment of the requirement of South Carolina Code of Law Section 44 36 10 and Section 44 36 50 which established the registry for the people of South Carolina and tasked the Arnold School of Public Health and OSA with its upkeep, management, and the dissemination of an annual report.

This report uses the abbreviation ADRD to indicate “Alzheimer’s disease and related dementias.” The term “related dementias” refers to dementias associated with vascular disease, mixed dementia and with other medical conditions such as Parkinson’s disease. Where the report refers specifically to “Alzheimer’s disease” (AD), analysis is limited to individuals with AD only.

Since January 1, 1988, the Registry has identified 238,524 cases of ADRD in South Carolina.

Registry Goals:

• Maintain the most comprehensive and accurate state registry of ADRD in the nation
• Provide disease prevalence estimates to enable better planning for social and medical services
• Identify differences in disease prevalence among demographic groups
• Help those who care for individuals with ADRD
• Foster research into risk factors for ADRD

Other Activities of OSA:

In addition to maintaining the Registry and conducting research using this valuable state resource, OSA works to provide South Carolina’s older adults and their families with access to quality, reliable health and long-term care service delivery systems. Specifically, OSA’s focus includes the following:

• Provide education on ADRD management
• Develop training on long-term care issues
• Contribute technical assistance for programs for older South Carolinians
• Develop programs including Dementia Dialogues
• Evaluate programs for South Carolina’s aging population
• Conduct research on aging and public health issues
Acknowledgments

The South Carolina Alzheimer’s Disease Registry has developed into one of the nation’s most important and premier resources for understanding ADRD. The growth and development of the Registry and the related research programs at OSA have been due to the support of many organizations and agencies. The leadership and staff of OSA want to acknowledge the particular contributions of:

• The Arnold School of Public Health at USC, for core support;

• The Revenue and Fiscal Affairs Office Health and Demographics Section, for its extensive cooperation in maintaining the Registry;

• The USC School of Medicine (Department of Medicine, Division of Geriatrics), for providing collaboration;

• The SC Department of Mental Health, for access to data;

• The SC Department of Health and Human Services, for core support and access to data;

• The SC Public Employee Benefit Authority, for access to data;

• The SC Department of Health and Environmental Control, Vital Records and Public Health Statistics; and

• The Lieutenant Governor’s Office, Office on Aging, for its continued support.
Introduction

Someone in America develops Alzheimer’s every 66 seconds; by mid-century someone will develop Alzheimer’s every 33 seconds.¹

In 2010, the U.S. Census Bureau estimated that there were 631,784 people 65 years of age and older living in South Carolina, and the state was ranked 23rd among other states with regard to the percentage of persons aged 65 years and older. Since that time, the older adult population in South Carolina has grown at a rapid rate. In 2015, the percentage of those 65 years and older in South Carolina was estimated to be 16.2% of the total population. In fact, by 2030, the U.S. Census Bureau projects that South Carolina will be home to 1.1 million people ages 65 years and older, potentially propelling South Carolina to a ranking of 15th in the nation for the highest percentage of residents over 65 years of age.¹

ADRD represent an ever-increasing area of concern for families and the healthcare community. Nationwide, an estimated 5.4 million people in the United States are currently living with AD. By 2025, this estimate is expected to reach 7.1 million; by 2050, the number of people age 65 and older with AD may nearly triple, from 5.2 million to a projected 13.8 million.² With increasing age as a leading risk factor for AD, South Carolina’s rapidly growing population of persons aged 65 years and older presents a challenge to families, communities and those who plan and deliver services for the state.

This report covers data from calendar year 2013. Registry cases in this report are defined as AD, vascular (vascular), mixed dementias (mixed) and ADRD in other medical conditions (other). Registry cases are identified by location of residence, either in a facility (nursing facilities or residential care facilities), in the community (home or adult day care) or in an unknown location. Exclusions of some demographic information are due to the voluntary method of data collection. It should be noted that many cases may be identified at a late stage of the disease rather than at onset. This affects the time from entry into the Registry until death.

ADRD is an umbrella term that encompasses many types of neurocognitive disorders. The Diagnostic and Statistical Manual of Mental Disorders - 5th Edition (DSM-5) states that AD can be diagnosed with a level of certainty if there is 1) clear evidence of decline in memory and learning and at least one other cognitive domain (based on detailed history or serial neuropsychological testing), 2) steadily progressive, gradual decline in cognition, without extended plateaus, and 3) no evidence of mixed etiology (i.e., absence of other neurodegenerative or cerebrovascular disease, or another neurological, mental, or systemic disease or condition likely contributing to cognitive decline). AD is a type of ADRD with an insidious onset and gradual progression of cognitive and behavioral symptoms.³ Other types of ADRD include those related to stroke, mixed dementia (with both Alzheimer’s and vascular dementia), and dementias associated with medical conditions such as Parkinson’s disease, Huntington’s disease, dementia with Lewy Bodies (DLB), AIDS, and alcohol or drug abuse.

**ADRD in South Carolina**

The prevalence of ADRD in the United States is currently estimated to be 11% among persons aged 65 and older and about 32% among those aged 85 and older. By 2000, there were 485,333 South Carolina residents 65 years and older. In 2015, there were 793,176 South Carolina residents 65 years and older, representing 16.2% of the total population, an almost 64% increase.

The total number of persons with ADRD in South Carolina is not known with certainty. National estimates of ADRD prevalence vary widely from one study to another. Individuals who have mild forms of the disease, but lack a diagnosis, do not appear in the Registry data. Previous research suggests that the number of individuals with ADRD may be nearly 50% greater than the number with diagnosed ADRD. Even noting that fact recognized, the South Carolina Alzheimer’s Disease Registry is the best population-based Registry of ADRD in the country. There are only two other such registries in existence. One, is located in West Virginia and began collecting data in May 2008. The second is in Georgia and began collecting data in 2014.

Individuals with ADRD are usually identified when they (or their family members) seek provider services. Since no single system identifies all newly diagnosed patients with ADRD, cases are collected from several sources (see Figure 1). This ensures that the Registry captures as many diagnoses as possible.

**Figure 1**

**Registry Data Sources**

*South Carolina Alzheimer’s Disease Registry, 2013*

---

History of the Registry

1988

The Alzheimer’s Disease Registry was established in 1988 to record specific information about South Carolinians who develop ADRD.

1990

On May 31, 1990, Governor Carroll A. Campbell, Jr. signed a state law authorizing the Registry. This law (R653, H4924) amended Title 44, Code of Laws of South Carolina 1976, relating to health, by adding Chapter 36 establishing a voluntary Statewide Alzheimer’s Disease and Related Dementias Registry located within the School of Public Health at USC. The law has strict confidentiality requirements but does allow Registry staff to contact the families and physicians of persons diagnosed as having ADRD to collect relevant data and provide information about public and private health care resources available to them.

1993

From July 1993 to May 1996, the Registry was moved to the James F. Byrnes Center for Geriatric Medicine, Education, and Research, a geriatric research hospital jointly sponsored by the USC School of Medicine and the South Carolina Department of Mental Health.

1997

The Registry was moved back to the School of Public Health at USC. The Registry is currently maintained by OSA located within the Arnold School of Public Health.

2009

The Registry celebrated its 20th anniversary in 2009. It continues to collect and provide prevalence data to public and private entities for planning and foster research in risk factors for ADRD, including the risk of institutionalization. The Registry receives widespread support and interest from the academic community, lay support groups, state agencies, and other public and private organizations as part of a statewide effort to study the growing impact of ADRD on the health and welfare of older South Carolinians.

2015

The 25th Registry report was published, with a celebration of the 25th anniversary of the legislation authorizing the Registry being signed into law.
Registry Procedures

A definitive diagnosis of ADRD is difficult, especially in the early stages. The Registry staff is not directly involved in diagnosis; the physician’s diagnosis is collected from the individual’s medical records through codes using the International Classification of Diseases, 9th revision, Clinical Modification (ICD-9-CM, 2010). An individual is then classified into four general categories for reporting purposes as shown in Table 1.

Individuals with ADRD are usually identified, when they (or their family members) seek provider services. Since no single system identifies all newly diagnosed patients with ADRD, cases are collected from several sources (see Figure 1, page 7).

</tbody>
</table>
| | | The following conditions are included with a dementia code*:
| | 046.1 | Creutzfeldt-Jakob disease |
| | 310.1 | Organic brain syndrome |
| | 310.2 | Chronic traumatic encephalopathy |
| | 331.1 - 331.9 | Other cerebral degeneration |
| | 332.0 - 332.1 | Parkinson’s disease |
| | 333.4 | Huntington’s disease |
| | 042 | HIV |

NOTE: In the case where a person’s record contains multiple indicators of the above categories, Alzheimer’s disease and vascular dementia take precedence, except in the case where there are indications of both Alzheimer’s disease and vascular dementia. In this case, the person is classified as having mixed dementia. Those classified with dementia in other medical conditions have no indications of Alzheimer’s disease or vascular dementia.

*One of the following dementia codes must also be present: 290.0-290.3, 290.8-290.9, 331.0, 290.4-290.43, 291.2, 292.82, 294.10, 294.11, 331.82.
**Registry Core Data Items**

The registry core data set (Table 2) consists of case-identifying data and diagnostic data (ICD 9 CM codes), and the place from which the records were obtained. Other information collected, if available, includes other medical diagnoses, educational status, caregiver contact data for follow up, and marital status.

</table>
South Carolina Population Prevalence of ADRD

- In 2013 the Registry maintained information on 91,741 individuals living with ADRD.
- Based on the Registry and 2013 population estimates from the United States Census:
  - 11% of South Carolinians age 65 or over have ADRD;
  - 44% of South Carolinians age 85 or over have ADRD;
  - ADRD prevalence rates vary notably among SC counties; and
  - African Americans are at notably higher risk of an ADRD diagnosis than are non-Hispanic whites. At ages 65 and older, for example, African American South Carolinians are 68% more likely to have ADRD as are non-Hispanic whites.

Registry Overview:

Of South Carolinians with diagnosed ADRD:

- 60% have AD;
- 12% have a dementia due to stroke;
- 25% have a dementia related to other chronic conditions;
- 26% live in an institution;
- 63% are women;
- 28% are African American; and
- 44% of those with AD are 85 years or older.

ADRD Prevalence across South Carolina Counties

Figure 2 shows the percentage of individuals age 50 or over with ADRD in 2013. The county prevalence rates vary from a low of about 2.5%, to a high of about 7.5%. This county variation provides an important starting point for epidemiological studies of ADRD. It should be noted that counties where residents enjoy particularly long lives are likely to have greater percentages of individuals with ADRD. This is because the risks of ADRD rise dramatically at older ages. The map is useful because it illustrates where the greatest service needs are for the oldest old, who are more likely than others to require institutional care.
Characteristics of ADRD in South Carolina

Since January 1, 1988, 238,524 cases of ADRD have been identified in South Carolina. This report describes demographic characteristics and medical information for the 91,741 cases alive on January 1, 2013 displayed by type of ADRD.

Type of ADRD

Among the 91,741 Registry cases in 2013, 59% had a diagnosis of AD and 12% had a diagnosis of vascular dementia, which is often associated with stroke. In the event of records showing both AD and vascular dementia, the case was reported in a mixed dementia category (4% of all Registry cases). The additional 25% for the total number of “Other Conditions” had a dementia related to other medical conditions, such as Parkinson’s disease (see Table 4 for complete listing). The diagnosis shown represents the most current diagnosis in the data received.

Location

As shown in Figure 3, more Registry cases resided in the community (69%) than in a nursing facility (26%) or unknown locations (5%). The distribution of the types of ADRD was similar in the community and in nursing facilities (Table 3, Figure 4).

</tbody>
</table>

*Mixed dementia = both Alzheimer’s and Vascular dementia; Other conditions = dementia in other medical conditions.
Dementia in Other Medical Conditions

In addition to AD, the Registry tracks dementias that are associated with other medical conditions, such as Parkinson's disease, alcohol and drug abuse, and HIV/AIDS. In the 2013 Registry, there were 21,717 persons with a dementia associated with one of these conditions who did not also have a diagnosis of AD or vascular dementia. Seven percent had dementia associated with Parkinson's disease and 31% had an indication of dementia associated with some other medical condition (Table 4 footnote). The percentages in the table are not mutually exclusive due to the fact that some records indicate more than one medical condition.

Dementia with Lewy Bodies

Dementia with Lewy Bodies (DLB) is a progressive brain disease characterized by abnormal round structures in the areas of the brain that control thinking and movement. Hence, DLB causes symptoms similar to those commonly associated with both AD and Parkinson's disease. Like AD, it can cause confusion, memory loss, and depression, while other possible symptoms are slowed movement, rigid muscles, and tremors, symptoms normally found in those with Parkinson's disease. Persons with DLB may also have hallucinations and experience day-to-day changes in their symptoms. Currently, there is no cure for DLB. Medications used to treat AD, Parkinson's disease, and depression are typically used to manage DLB symptoms. National estimates suggest that DLB accounts for approximately 10-25% of all dementia cases. In the South Carolina Registry, DLB accounted for 10% of the dementia in other medical conditions category and only 2% of all dementia cases.

*Dementia with other conditions includes those with an ICD-9-CM code in 294.1 (dementia in conditions classified elsewhere) on their medical record. This code is listed along with the ICD-9-CM code of the dementia-causing condition. However, the dementia-causing condition may not be identifiable from the record, and therefore, may not be in the above table.
Age and ADRD in South Carolina

Table 5 shows that in 2013, 44% of persons with AD were 85 years of age or older. Figure 5 shows this information graphically for all dementias included in ADRD, with 39% of persons over 85 years of age. Figure 6 indicates that for people with ADRD, 70% of those 75 - 84 years of age were being cared for in the community. Living in the community is most often the location of choice for the individual with ADRD and the family. However, as Figure 6 indicates, with age comes an increase in movement to nursing facilities.

Figure 6
Registry Cases by Age Group and Place of Residence
South Carolina Alzheimer’s Disease Registry, 2013
Gender and ADRD in South Carolina

Table 6 shows Registry cases by gender, ADRD type, and age group. For each dementia type, the number of women was notably larger than the number of men in all but the youngest age category. In particular, among those age 85 or over, the number of women with ADRD was almost three times the number of men with ADRD. More women than men in this population were diagnosed with ADRD (Figure 7). This is likely due to the larger number of women alive after age 75. The differences in the ADRD diagnoses by gender are shown graphically in Figure 8.

Race and ADRD in South Carolina

Compared with whites, African Americans, who comprise approximately 20% of the South Carolina population 65 years and older, were over-represented in vascular dementia (38%) and in the overall Registry (28%; Table 7). At ages 65 and older, for example, African American South Carolinians are 68% more likely to have ADRD as are non-Hispanic whites. Seventy three percent of African Americans with ADRD reside in the community compared to 67% of whites living in the community (Figure 10).

Deaths Among Individuals in the Registry

The Alzheimer’s Disease Registry data are linked with death certificates to summarize the deaths occurring among persons in the Registry. Of those people identified with ADRD since 1988, 156,488 have died (Table 8). The individual’s first date of diagnosis may not be known to the Registry in every instance. For example, if an individual is first diagnosed during a physician office visit, then that diagnosis is not available to the Registry. The Registry uses the first date that a person entered one of the systems reporting to us as their entry date.

AD=Alzheimer’s disease or senile dementia; Vascular=Vascular dementia; Mixed=both Alzheimer’s disease and Vascular dementia; Other=dementia in other medical conditions.

Table 9 lists the top 10 underlying causes of death for persons 65 years of age or older in the Registry who died during 2013. The #1 underlying cause of death for these persons was attributed to senility and organic mental disorders. This category includes AD and many other dementing illnesses. Nationally, the leading causes of death for persons ages 65 years and older were: heart disease, cancer, chronic lower respiratory diseases, cerebrovascular disease, AD, diabetes, influenza and pneumonia, accidents, nephritis, and septicemia. As can be seen in Table 9, the underlying causes of death for those with ADRD in the Registry closely mirror the national trend.

Programs and Trainings

In addition to registering and tracking individuals with ADRD, the OSA also conducts other activities focused on aging issues of older individuals.

A. Dementia Dialogues

Although much research has been conducted on the causes of and cure for AD, little information is available about hands-on care. Dementia Dialogues provides the most current and practical information in the care of people with dementia. OSA’s extensive research supports this training program.

Dementia Dialogues is a training course designed to educate the community and individuals who care for persons who exhibit signs and symptoms associated with ADRD.

Dementia Dialogues consists of five sessions, each approximately 1.5 hours in length.

1. “The Basic Facts” – An overview of ADRD.
3. “It’s a Different World” – Understanding the impact of the environment and ways to promote independence in activities of daily living.

Each participant receives a certificate of participation for each session and a Dementia Specialist Certificate upon completing all five sessions. The program is offered at no cost to participants and is held regionally by approved trainers. Over 21,000 professionals, non-professionals and family caregivers in South Carolina have received this training. For further information including training materials and contact information for trainers please visit www.sph.sc.edu/OSA/programs_dementia.html.

B. Evaluation Sub-Award for the Greenville Health System – REACH Program (GHS – REACH)

- **FUNDING SOURCE:** Administration for Community Living – Administration On Aging (Alzheimer’s Disease Initiative – Specialized Supportive Services), 2015-2018
- **PRINCIPAL INVESTIGATOR:** Ana Teixeira, PhD
- **CO-INVESTIGATOR:** Maggi Miller, PhD

OSA serves as the evaluator for the three year program GHS-REACH (PI: James Davis, MD), that seeks to expand and enhance the educational and supportive services to persons with ADRD and their caregivers through the provision of caregiver coaching and education.

The OSA evaluation team is responsible for designing the evaluation methodology and instruments, conducting analysis and program reporting. The GHS-REACH evaluation aims are to assess whether program objectives were reached and develop tools for program monitoring and quality assurance. This evaluation uses a mixed methods approach consisting of multiple assessments pre-, during, and post intervention.
C. Healthy Connections Prime Training

Healthy Connections Prime is a new option for seniors 65 and older who are eligible for Medicare and Medicaid benefits. This program is a partnership between South Carolina Department of Health and Human Services and the Centers for Medicare and Medicaid Services. Through Healthy Connections Prime, members will receive the full range of services, managed by a single Healthy Connections Prime Medicare-Medicaid Plan.

OSA has developed six trainings for the three participating Medicare-Medicaid plans and providers. Trainings that have been developed include the following topics and associated outcomes:

1. Essential of Effective Care Planning (Assessment and Planning)
   - Participants will understand the importance of assessments.
   - Participants will learn motivational interviewing techniques.
   - Participants will better understand the role of the Care Coordinator in the Assessment and Care Planning process.

2. Determinant of Abuse/Neglect and Safety Concerns
   - Participants will better understand the various types of abuse.
   - Participants will identify their role in the investigative process.
   - Participants will better understand safety risks in the field.

3. Dealing with Difficult People
   - Participants will better understand the meaning of resistance.
   - Participant will understand the reasons behind resistance.
   - Participants will identify strategies to address resistance.

4. Overview of Special Populations
   - Participants will better understand the various populations that exist in the service delivery system.
   - Participants become aware of the various services and supports that are available for special populations.

5. The Impact of Multi-Disciplinary Teams
   - Participants will better understand the benefits and challenges to integrating multidisciplinary teams into a care coordination model.
   - Participants will identify strategies to address barriers within multidisciplinary teams.
   - Participants will develop strategies to building and sustaining effective multidisciplinary teams.

6. Improving Transitional Care Practices
   - Participants will gain a better understanding of how care coordination intersects with care transitions.
   - Participants will better understand how communication barriers impede successful transitions.
   - Participants will be able to identify steps to improve the transition process.
D. Home Care Specialist Training

The Home Care Specialist course provides training on chronic disease management and is intended for Personal Care Aide (PCA) workers caring for people in their own homes.

This course provides PCAs with an extra level of training about chronic disease conditions affecting their clients. PCAs learn about warning signs and symptoms of nearing health crisis, and receive practical information about what to do and who to call to help prevent or better manage their clients’ health crisis.

The training consists of 13 self-paced online modules:

1. Introduction to the Home Care Specialist Training
2. Congestive Heart Failure
3. Dehydration
4. Pneumonia
5. Incontinence and Urinary Tract Infections
6. Heart Attack
7. Chronic Obstructive Pulmonary Disease
8. Hypertension
9. Stroke
10. Diabetes
11. Dementia and Mental Status Change
12. The Final Phase of Life
13. Falls

The Home Care Specialist training course is provided at no cost. Upon completion PCAs earn a Home Care Specialist certificate. This course and additional information will be available online at https://web.asph.sc.edu/osa/.

E. South Carolina Healthy Brain Research Network (SC-HBRN) Collaborating Center

- **FUNDING SOURCE:** Centers for Disease Control and Prevention (CDC), 2014-2019
- **PRINCIPAL INVESTIGATOR:** Daniela B. Friedman, MSc, PhD
- **CO-INVESTIGATORS:**
  - Sue E. Levkoff, ScD
  - Sara Wilcox, PhD
- **CONSULTANT:** Rebecca H. Hunter, MEd, University of North Carolina at Chapel Hill

USC was selected to serve in the role of Collaborating Center in the CDC Prevention Research Centers’ (PRC) Healthy Brain Research Network (HBRN). The SC-HBRN has three specific aims: (1) establish a research agenda concerning cognitive health and healthy aging, (2) advance research in the areas of cognitive health and healthy aging, and (3) support fellowship training of students. We share the funder’s goal of advancing the public health and aging agenda by making a major contribution to CDC’s Healthy Brain Research and working with other HBRN Centers and public health partners to increase their capacity to

To learn more about the SC-HBRN, please contact Dr. Daniela Friedman at: dbfriedman@sc.edu

**F. Nurse Aide Training Conference**

The OSA along with the SCDHHS and its community partners hosted the 12th annual Nurse Aide Training Coordinators and Instructors Workshop on April 22, 2015 at the Conference Center of the South Carolina Hospital Association. This workshop included guest speakers, skills sessions, a best practices panel, and networking, and was held to bring together nurse aid training coordinators and instructors who are responsible for the training of nurse aides, for the purpose of learning, sharing ideas, networking and assuring consistency of excellence in nurse aide training programs.

The featured speaker, Dr. Linda Karges-Bone, a Professor in the School of Education at Charleston Southern University and the director of Education InSite, engaged the audience with the topic Education and Differentiation: Teaching and Learning with the Brain and Mind. Additional featured speakers and panelists were from universities, colleges and teaching facilities across the state.

The objectives of this workshop are:

1. To provide interactive training;
2. To provide opportunity for networking;
3. To build capacity to be better instructors.

**G. Healthy Aging Forum**

The SC-HBRN and its network partners hosted a Healthy Aging Forum: A Focus on Brain Health on December 9, 2015 in the Program Room of the Ernest F. Hollings Special Collections Library at the USC Thomas Cooper Library. The forum included plenary and programmatic sessions, a research panel, and networking, and was held to advance the public health research and translation agenda for cognitive health and healthy aging.

The day began with opening remarks from South Carolina Lieutenant Governor Henry McMaster and a keynote speech by Dr. Victor Hirth. Additional featured speakers and panelists included members of the USC Arnold School of Public Health, USC College of Engineering and Computing, South Carolina Institute of Medicine and Public Health, The Division of Geriatrics at Palmetto Health, the USC Office for the Study of Aging, the South Carolina Department of Health and Human Services, the Alzheimer’s Association, and The FriendShip501(c)3 Village.

The objectives of the forum were:

1. To promote awareness about cognitive health, cognitive impairment, and Alzheimer's disease.
2. To describe current research related to physical activity, nutrition and cognitive health.
3. To foster collaboration and networking opportunities for researchers, students, and community organizations.
OSA Directory

Core Team

Daniela Friedman, Co-Director

Daniela Friedman is professor and chair of the Department of Health Promotion, Education, and Behavior, is the co-director of the Arnold School of Public Health’s Office for the Study of Aging. She is a leader in gerontology and community- and partner-engaged health promotion in South Carolina, dedicated to improving health literacy and reducing health disparities among older adults across the state. Friedman’s federally funded research networks, including the Centers for Disease Control and Prevention-funded South Carolina Healthy Brain Research Network and South Carolina Cancer Prevention and Control Research Network, are focused on the communication and dissemination of evidence-based health messages and programs. Dr. Friedman also directs the university-wide Certificate of Graduate Study in Health Communication.

Lee Pearson, Co-Director

Lee Pearson has more than 20 years of experience in addressing public health priorities in South Carolina, including a specific focus on the unique needs of the state’s aging population. Most recently, he helped to lead a statewide taskforce on long-term care. Dr. Pearson holds a doctor of public health degree in health promotion, education, and behavior, as well as a graduate certificate in gerontology. He serves as the co-director of OSA. In that role, he works with the entire OSA team to advance the core mission and promote expanded opportunities with collaborative partners. In addition to his role with OSA, Dr. Pearson is the associate dean for operations and accreditation in the Arnold School of Public Health, and he is a clinical associate professor in the Department of Health Promotion Education, and Behavior. He also serves on the board of the SC chapter of the Alzheimer’s Association.

Mindi Spencer, Associate Director of Research

Mindi Spencer is an associate professor in the Department of Health Promotion, Education, and Behavior, with a joint appointment in the Institute for Southern Studies. Broadly, her research focuses on how cultural and psychosocial factors influence health in older adulthood. She also continues to conduct research on caregiving and mental health among American Indian and African American elders. Dr. Spencer is the Principal Investigator of the “Youth Empowered Against HIV!” Project and a partner in the “Equalize Health” LGBT cultural competence training program for health care providers. Dr. Spencer serves on the Lt. Governor’s Alzheimer’s Resource Coordination Center and on the Minority Task Force of the Gerontological Society of America.

Maggi Miller, Research Associate and Registry Manager

Maggi Miller received her MS in health promotion from the University of Delaware and a PhD in epidemiology from University of South Carolina Arnold School of Public Health. Her primary responsibilities for the office involve research, grant writing, preparation and publication of scientific manuscripts, and evaluation of current research projects. She also manages the SC Alzheimer’s Disease Registry. Her research interests include Alzheimer’s disease and related disorders and caregivers of individuals with dementia.

Macie Smith, Program Development and Training Manager

Macie Smith is a Licensed Social Worker, Certified Social Work Case Manager, and a Social Worker in Gerontology with over 16 years of experience working with the aging and vulnerable populations. Dr. Smith holds a Doctor of Education degree in Higher Education Leadership with a specialization in Adult Education from Nova Southeastern University. She is the Program Development and Training Manager for OSA. She provides research, development of training programs, and coordinates program design and implementation. Dr. Smith also manages the Dementia Dialogues program. She provides direction, guidance, oversight, and management of recruitment, training the trainers, and program evaluation.
Ana Teixeira, Research Assistant Professor

Ana Teixeira is a research assistant professor in the Department of Epidemiology and Biostatistics, Arnold School of Public Health. Her research interests include aging, migrant health and aging, the economic and social determinants of health, ADRD, end of life decision making, and program evaluation.

Seul Ki Choi, Postdoctoral Fellow

Seul Ki Choi is currently a postdoctoral fellow in the Healthy Brain Research Network and at the OSA. She earned her PhD in public health from the University of South Carolina. Her research interests include health policy process, health communication, health literacy, and Alzheimer's disease awareness and caregiving practices.

Gelareh Rahimi, Graduate Research Assistant

Gelareh Rahimi is a doctoral candidate pursuing a major in Biostatistics. She is now working with OSA as a graduate research assistant helping with statistical analysis and providing reports on the Registry data. As for her dissertation, she is currently developing a method for misreporting adjustments in count models.

Kate Olscamp, Masters Student

Kate Olscamp, a master’s student in public health, is interested in the connection between physical activity and brain health, specifically how being active promotes positive mental health and cognitive functioning across the lifespan. She looks forward to studying the relationship between exercise and dementia, particularly in terms of how the connection is communicated to target groups. After graduation, Kate hopes to work within a government agency or nonprofit organization that strives to increase physical activity as a means of promoting optimal aging and cognitive health.

Weizhou Tang, Doctoral Student

Weizhou Tang is a doctoral candidate from College of Social Work who now works with Dr. Friedman’s team as an HBRN scholar member. She also completed the Health Communication Certificate Program in Arnold School of Public Health in Fall 2016. Weizhou’s current research interests are around family caregivers of persons with Alzheimer's disease. She is mostly interested in using quantitative research methods to understand caregiver's mental health across ethnic populations, and how it relates to coping skills, perceived social support, and care recipient's behavioral problems. In addition, she would like to promote public awareness of cognitive health through health communication.

Kristie Kannaley, Masters Student

Kristie Kannaley is a 2nd year student in the Master of Speech Pathology program in the Department of Communication Sciences and Disorders (COMD). She is a student scholar of the Healthy Brain Research Network and also works as a research assistant at the university’s Aphasia lab. Kristie completed her MA degree in linguistics and earned a graduate certificate in Teaching English as a Foreign Language. She transitioned to COMD to develop skills and competencies for working with older adults in a clinical setting as a speech-language pathologist. Kristie is interested in caregiver support/education, patient advocacy, cognitive retraining, and feeding and swallowing interventions. She is also interested in the development of clear strategies and techniques to help individuals with dementia live more empowered lives. Kristie plans to pursue a career in the medical field following graduation.
Affiliate Faculty
OSA is proud of its strong partnerships with faculty who represent multiple disciplines from across the USC campus.
