Recycling at Francis Marion University
Timothy E. Shannon
Department of Biology
Francis Marion University

This grant has allowed for the purchase of 58 recycling containers with lids and locks. The containers purchased are being used in areas where the students are most likely to congregate for leisure, meetings, and extracurricular activities (primarily dormitories and university center), in addition, containers have been placed in the Stokes Administration building. It is the belief that by placing these recycling containers on the campus in various locations has increased the amount of material being removed from the waste stream. Without these funds, recycling at Francis Marion University would be practically non-existent.

We have had excellent support from the administration in implementing the recycling program at FMU. The department responsible for trash removal not only placed the containers in the locations around campus, but also emptied the recycling containers. Funding from SUI has transformed FMU from a university concerned about environmental issues to a university willing to take action on these environmental issues.
