Grant funds allocated to Central Carolina Technical College from the SUI program for the 2001 grant period were utilized as follows:

A high capacity paper shredder was purchased for the college, allowing sensitive documents to be shredded in-house and sent for recycling, rather than disposal.

This shredder, as well as all other campus recycling programs, was featured at a campus-wide “Recycling Awareness Day” held November 15\textsuperscript{th}, 2001. Posters describing the recycling program efforts on campus (aluminum cans, office paper, college documents, used motor oil, and plastics) were displayed, and promotional items emphasizing recycling (globe stress balls, water bottles, & magnetic note pads) were distributed to participants. In addition, the City of Sumter Recycling Program was featured, and the program director was present to answer questions and provide informational material (flyers and promotional items.) The CCTC Earth Club designed a “Biodegradability Quiz”, and prizes were awarded to participants who correctly answered questions regarding the length of biodegradation required for a variety of consumer products.

In order to provide more widespread and continuous exposure to college staff, faculty, and students regarding the Central Carolina Tech campus recycling programs, the posters featured at the Recycling Awareness Day were laminated and are now posted in a different building on campus each month. Once the circuit has been completed, they will be permanently housed at the SC Environmental Training Center (Building 700.)
