Online Assessment Best Practices for Faculty

Course Policies

- Include an Academic Integrity statement in your course syllabi and on each exam. Sample statements are available on the Office of Academic Integrity’s website.  
- Be sure that your statement clearly spells out what behaviors and materials are unauthorized. The Office of Academic Integrity provides useful resources and definitions.  
- Quiz students on the course syllabus during the first week of class to ensure that they are familiar with your expectations.

Assignments

- Assign a variety of types of assessments during your course. Don’t assign just tests and quizzes. Consider essays, papers, projects, discussions, blogs, wikis, e-portfolios, etc.  
- Tweak assignments from term to term so that students will need to create original work.  
- Avoid assigning a single term paper or exam that counts for a large percentage of the grade of students.  
- Require students to submit parts of a big assignment over a period of time, i.e proposal, introduction, outline, draft.  
- For papers and other extended written assignments, use SafeAssign in Blackboard for plagiarism detection. For more information and a tutorial on SafeAssign, visit the SafeAssign web page on the Office of Academic Integrity’s website.

Exams

- When developing exams, design questions that require students to use higher order thinking skills. Avoid questions that allow students to “hunt” for answers.  
- Consider using a mix of objective questions (multiple choice/true-false) and subjective questions (short answer/essay).  
- Assign several short quizzes rather one or two lengthy exams.  
- Provide students with the exam format, exam length and time limitations before the exam.  
- Use the built-in Blackboard exam tools:  
  - Use test pools so that students will not receive the same exam questions.  
  - Include a timer on exams and select “ON” for “Auto-Submit”. When “Auto-Submit” is “ON”, the exam will save and submit automatically when the time expires. This option is a better option than “Force Completion”. If “Force Completion” is enabled and a student gets kicked out of an exam for technical reasons, they will need to re-start the exam.  
  - Set “Display After” and “Display Until” dates to control how long the exam is available.  
  - Randomize questions and randomize answers.  
  - Present one question at a time.  
  - Display correct, submitted and answers only after the due date.
