UofSC Employee,

This is a second message regarding information you may have stored on the University of South Carolina mainframe computer. If you have already taken action, please ignore this email.

The Division of Information Technology has determined that you or someone in your department may have created, accessed or stored information on the mainframe computer. The mainframe computer has been used at the university for the past 40 years to store administrative, academic, research and personal data. It is out-of-date and will be retired in the near future.

Listed below/attached to this message is a list of user IDs that may have data stored on the mainframe. If you have ever stored data on the mainframe, you will have a mainframe user ID, which is different from your current Network Username (the first portion of your email address). Please take a moment now and review the list of mainframe user IDs. Your assistance in identifying any data you, or employees in your department, have stored on the mainframe is important, as individual information stored on the mainframe will NO LONGER BE ACCESSIBLE after September 30, 2019. If you would like to retain any data on the mainframe, you must move it to a secure location before September 30, 2019. If the data is no longer needed, no action is necessary.

Please do not reply to this email. If you have questions, please reference these Frequently Asked Questions. If you still need assistance accessing your data, please call the Service Desk at 803-777-1800. You can also submit a ticket online. Simply enter Mainframe Decommission into the search bar at the top of the page and you will be directed to a form to complete.

Thank you,

Division of Information Technology
