Improving Student Outcomes in Mathematics: What Do We Know? What Can We (Reasonably) Do?

Dr. Wendy M. Smith University of Nebraska-Lincoln University of South Carolina Colloquium, 4 October, 2022

SEMINAL is supported by a grant from the National Science Foundation (DUE-1624643, 1624610, 1624628, and 1624639). All findings and opinions are those of the authors and not necessarily of the NSF.

Student Engagement in Mathematics through an Institutional Network for Active Learning

1. Learn about change levers from SEMINAL

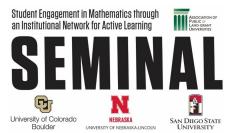

- **2.** Consider the role of policies in change efforts
- 3. Consider a systems-thinking approach to policies &

change

4. Discuss how to apply findings

Goals

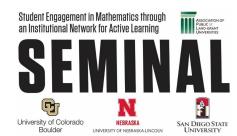

IINAL ge efforts ch to policies &

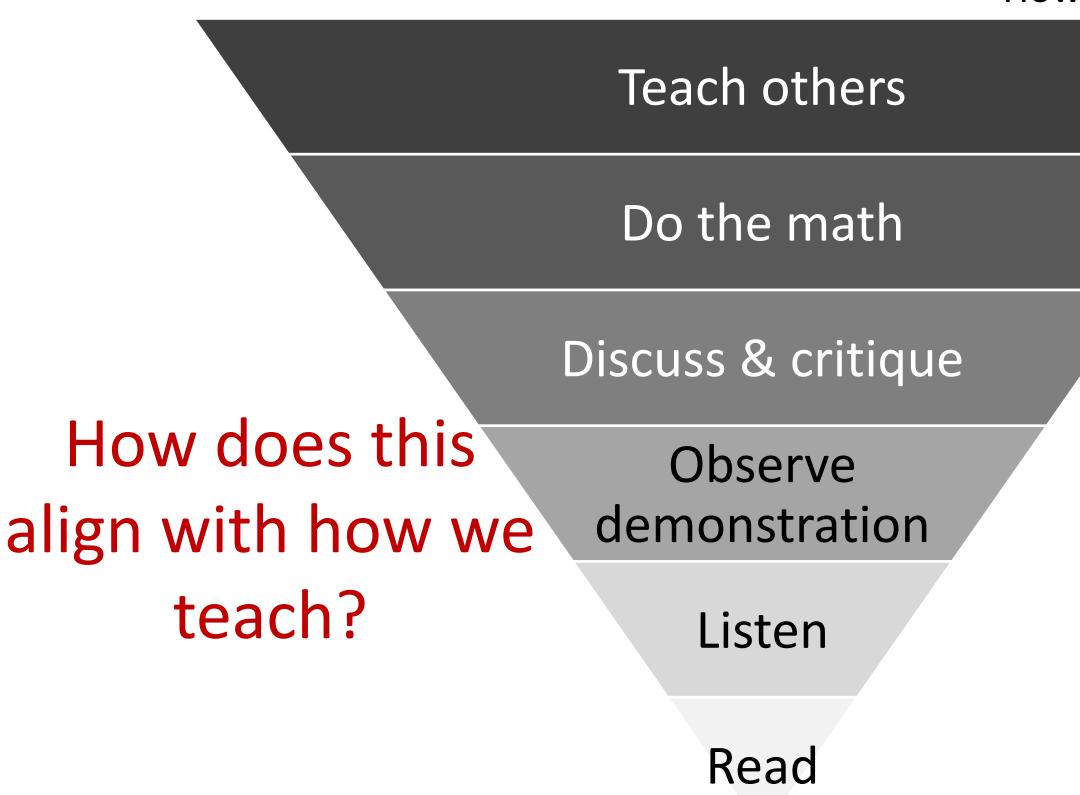

- 95% of students in college math are taking courses at/below Calc 2 (3.2M)
- **Average of 25% DFW at R1 institutions in Calculus** (often closer to 50%)
- Failing math correlates highly with freshman dropouts
- After freshman year, students switch away from STEM majors (9-25%)
- **Beliefs about & attitudes toward mathematics K-20** follow a decreasing trajectory

What is the Problem?

How Do People Learn?

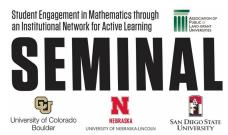

earning of Amount

Teaching methods and classroom norms that promote:

- **Students' deep engagement in mathematical** 1. reasoning
- **Peer-to-peer interaction** 2.
- Instructor interest in and use of student 3. thinking
- **Instructors' attention to equitable and** 4. inclusive practices

What is "Active Learning"?

Undergrads in active learning environments can learn more effectively, resulting in increased achievement and improved dispositions (Freeman et al., 2014; Laursen et al., 2014; Rasmussen & Kwon, 2007), particularly for underrepresented groups (Laursen et al., 2011; Theobald et al., 2020).

How Do People Learn?

An n-dimensional problem (n>2) cannot be solved with a 1- or 2-dimensional solution

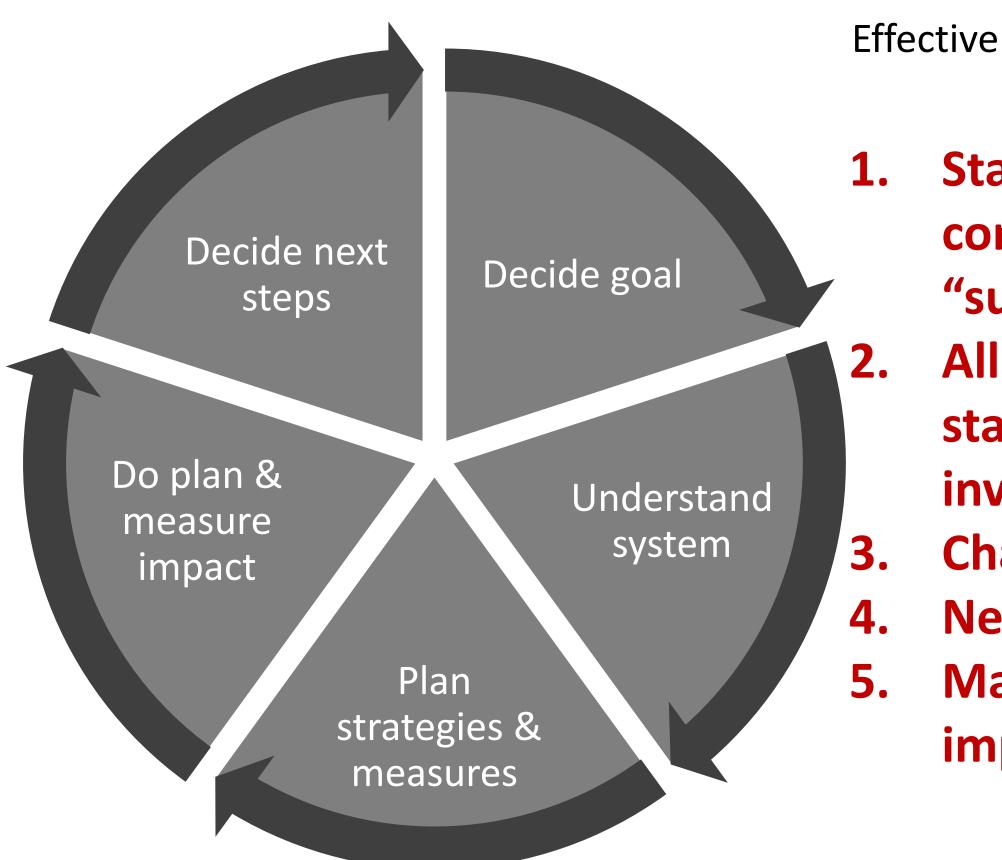

• Systemic approach needed to address the system that created/perpetuates current problems

• Cultural change is needed for a dept to shift away from lecture as the norm

• Cultural change encompasses people, power, structures, & beliefs

How Can We Approach Change?

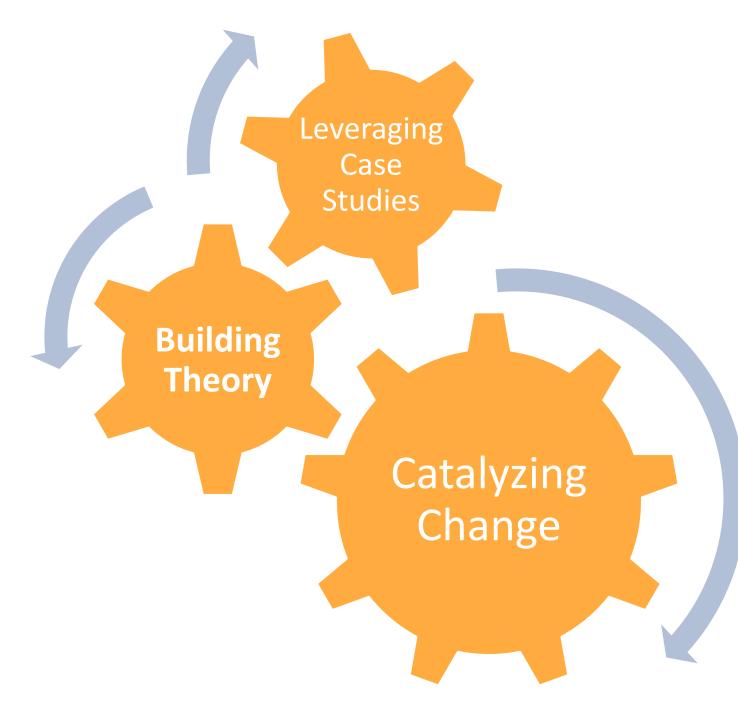

Effective Change Process Assumptions Start by developing a common vision of "success" All relevant stakeholders are involved **Change is complex Need "change agents" Mathematical rigor is** important

Goal: better understand how to enact and support institutional change aimed at implementing active learning in undergraduate mathematics learning environments

- \$3.6 million, 2016-2022
 - APLU П
 - University of Colorado Boulder
 - University of Nebraska-Lincoln Π
 - San Diego State University
- Phase 1: 6 cases of retrospective change
- Phase 2: 9 cases of incentivized change
- Phase 3: 12 cases of networked change
- AMS/MAA/CBMS handbook (May 2021)

Seeing the System

Institution

Department

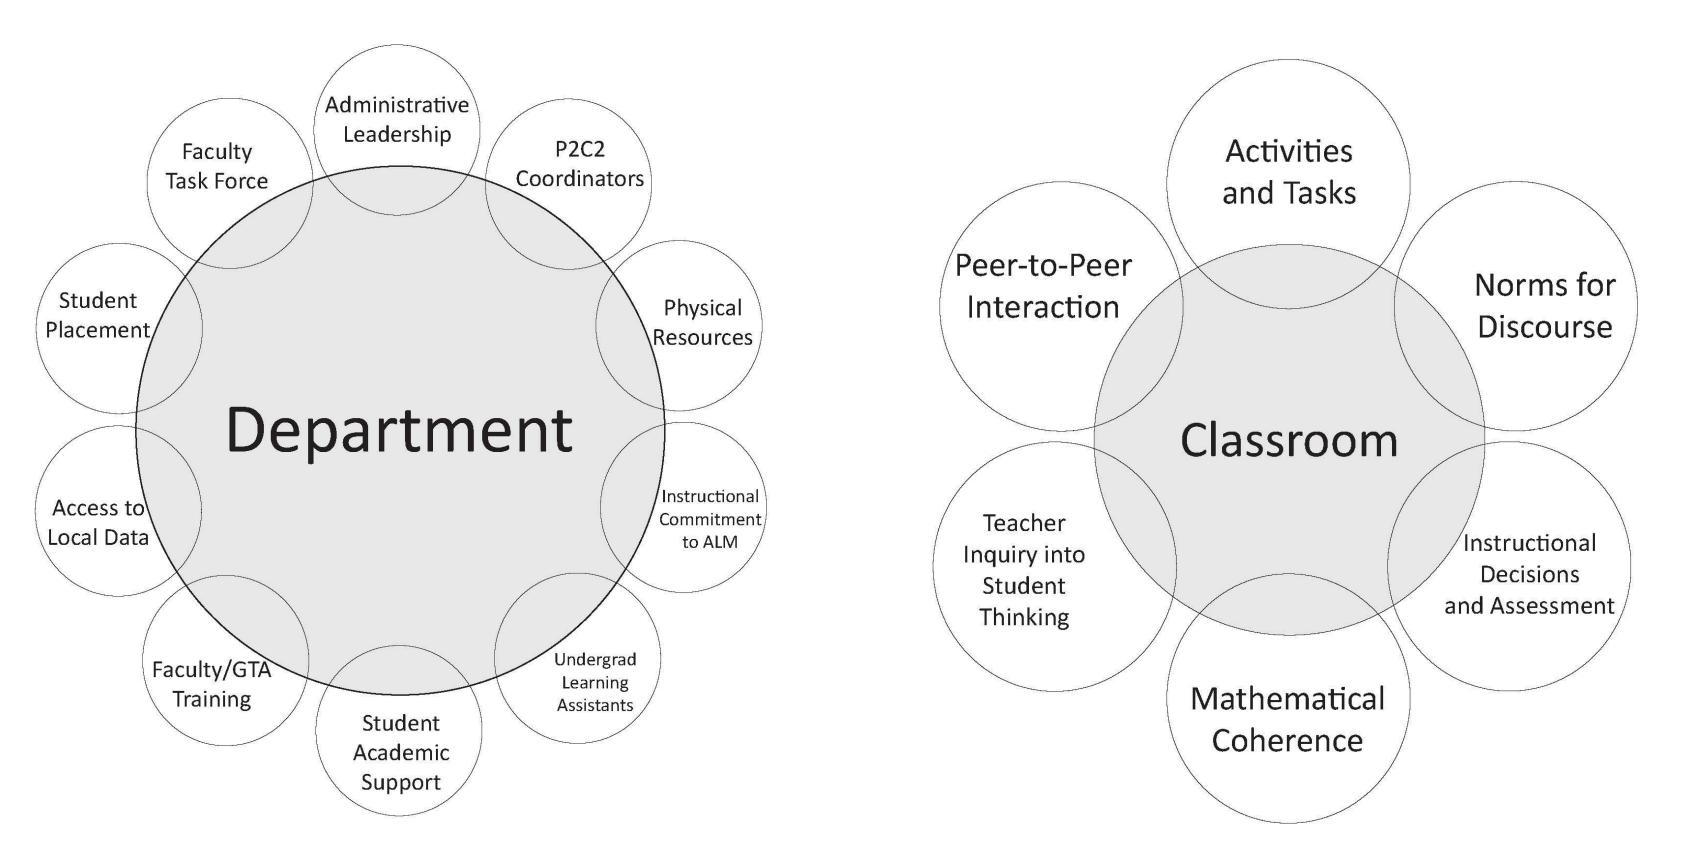

Classroom

Instructors

Students

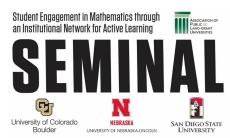

SEMINAL hypothesis

Critical features of transformed institutions: Institutional & community identities Campus culture with respect to teaching Effective leadership (opportunistic) Willingness to pay the costs of improved instruction Coordination of multi-section courses Sufficient support for enacting new pedagogies Flexibility

Plan for succession/enculturation of people

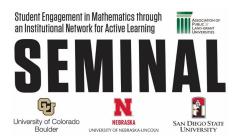

SEMINAL Phase 1 Findings

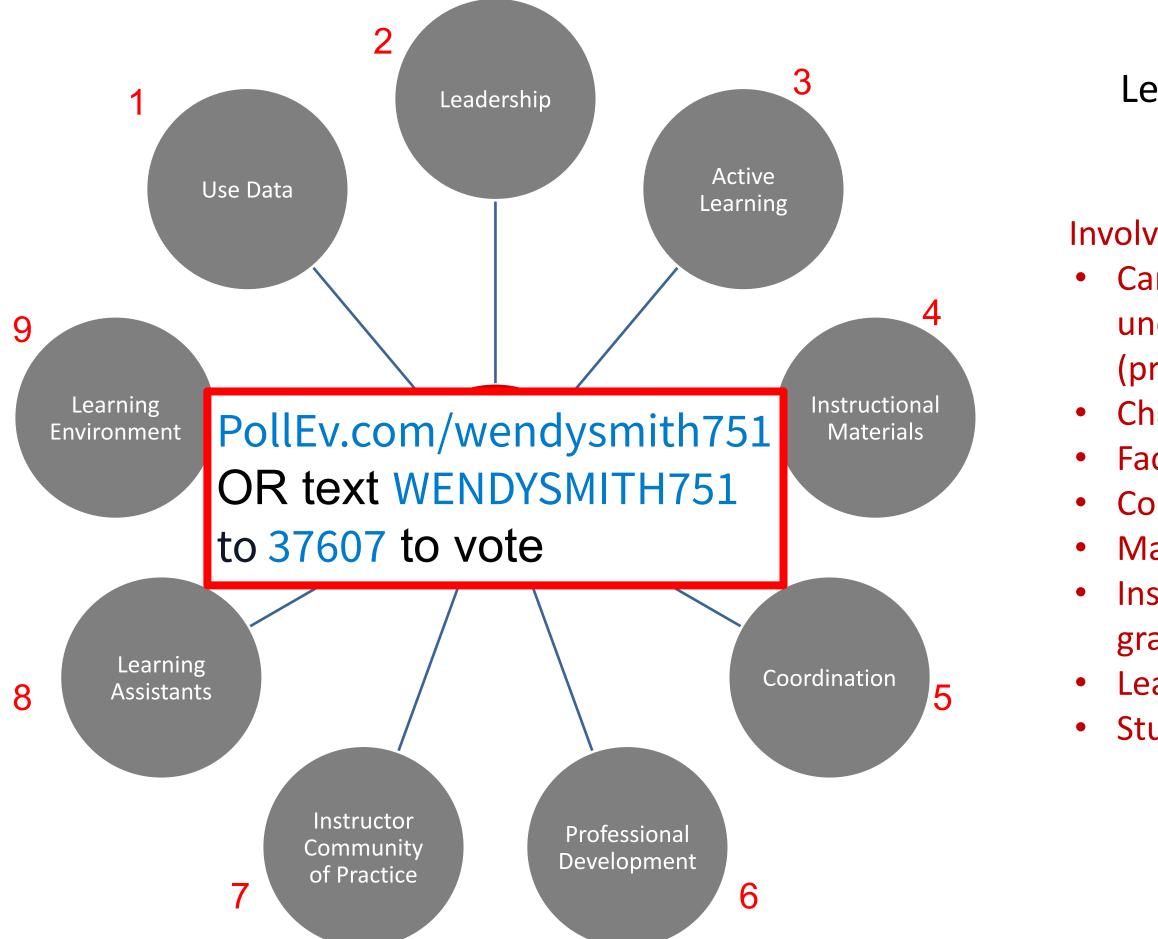

SEMINAL Phases 2 & 3 - Local Change Strategies

- Initiate & expand course coordination (including assessments) •
- Hiring (course coordinators, learning assistants; instructors)
- **Instructor professional development**
- Local data & course placement •
- **Active learning tasks & materials**
- **Culturally responsive teaching**
- **Planning for sustainability**
- **Recruiting strategic members (positions of power)**
- **Connecting with a network**

Levers for Change

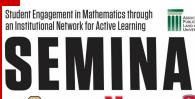

Involvement of: Campus administrators for undergraduate education (provost & dean levels) Chair & Vice Chair **Faculty Task Force Course Coordinators** Math Ed Researchers Instructors (faculty, adjunct, grad) Learning Assistants **Students**

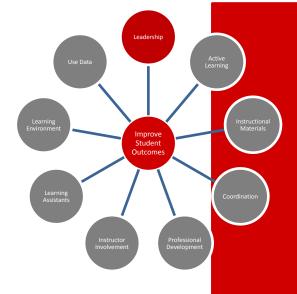

Access to university data system (student demographics, major, retention, graduation)

- Attendance (class, Learning Center)
- DFW rates & enrollment
- Course-taking trajectories (subsequent grades)
- Student surveys (beliefs, perceptions)
- Focus group interviews (students, instructors)
- Instructor survey, interviews
- Observation (coordinators, peers)
- Assessments (homework, exams, item-level)
- Department culture, instructor networks

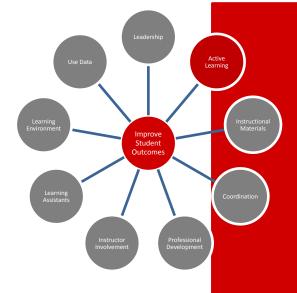

- **Dept chair committed to efforts**
- Faculty committee to drive and sustain reforms
- Align to university efforts
 - Freshman retention; graduation rates
 - Campus administrators' priorities
- Coordinators
 - Semi-permanent
- Plan for sustainability
- Plan for turnover & bringing new people on board

Leadership

In most classes

- Group work for majority of time
- Class time focuses on application problems
- Mini-lectures for 5-10 min as needed
- Instructor (+ Learning Assistant)

In large lectures

 Clicker questions to prompt discussions

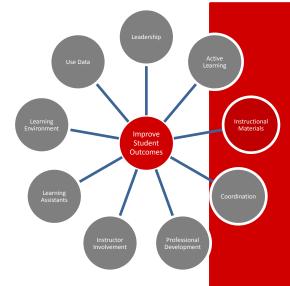

Active Learning

ime ation

needed ant)

Student Engagement in Mathematics through an Institutional Network for Active Learning

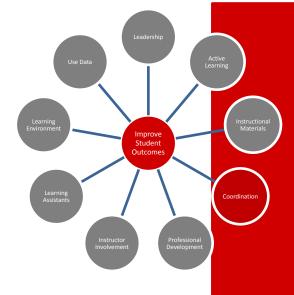

Common course activities Worksheets **Course Packets** Assessment Homework Quizzes Exams/Midterms Textbook/OER **Messaging to students & instructors**

Instructional Materials

tudent Engagement in Mathematics throu

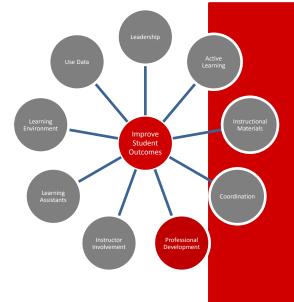

- **Syllabus**
- **Textbook (OER)**
- **Lesson Plan Repository**
- Course Packets/Worksheets
- Homework (e.g., WeBWoRK)
- Exams (Midterms & Final)
 - Common Grading (e.g., Grade Scope, Crowdmark)
- Weekly instructor meetings
 - **Begin prior to semester** ightarrow
 - Anticipating student misconceptions ightarrow

Coordination

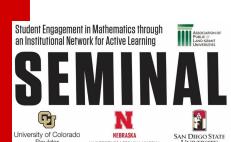

Professional Development

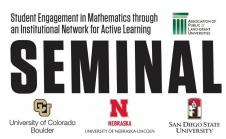

• Pre-Semester

- Weekly
 - Instructor meetings
- Dept Teaching Seminar
 - Faculty & grad students
- Travel to workshops (IBL)
- Pedagogy Course for GSI/LA

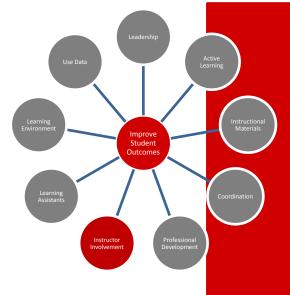

Results of Professional Development "While it may be tempting to simply authoritatively state the correct order in which to perform horizontal transformations, doing so effectively removes ownership of knowledge from students, and encourages them to view mathematics as a set of arbitrary rules to be applied blindly. By removing ownership from students, we ultimately discourage students from building their own base of knowledge surrounding the topic."

--Precalculus Instructor

Instructor Community of Practice

Textbook

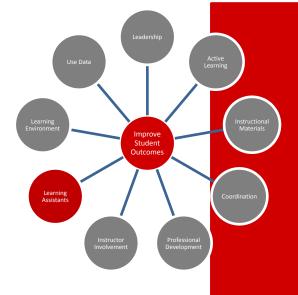

Lesson Plan Repository

contribute revisions, worked examples

- Weekly instructor meetings
- Advice networks for teaching and learning

Student Engagement in Mathematics throug

iversity of Colorad

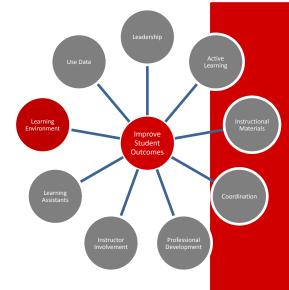

- Support group work
- Training in supporting active learning
- Meet with instructors weekly
 - **Reflect after class**
- Recruited from math majors & 'A' students in courses with learning assistants

Learning Assistants

tudent Engagement in Mathematics thro

Learning Environment rooms

• Dedicated, renovated classrooms

- Tables & chairs
- Whiteboards all around
- More time (50 75 min)
