Participants were equally likely to respond to both active and passive recruitment. The primary new breast cancer survivor was her partner.

Quality of Service
- 99% of participants reported having a positive experience in the workshops.
- 95% thought the program was valuable.
- 94% would recommend or refer the program to someone else.

Engagement
- 57% of participants enrolled in the program to learn how to improve their relationships.
- 92% of participants indicated they were likely to return after their first visit.
- 90% of participants who indicated they were likely to return after the first visit did return.

Findings
- Participants with higher psychological distress and lower emotional regulation had a higher probability of dropping out of the program at the 6-month follow-up.

Characteristics of Participants
- 1,129 participants were satisfied with the content of the RE workshops.
- Reported having a positive experience in the workshops.

Treatment and Control Group
- Treatment Group (WMR): Received a 12-hour relationship education curriculum immediately after study enrollment over the course of four weeks.
- Wait List Control Group: Did not receive relationship education curriculum immediately after study enrollment.
- Received a condensed adaptation of the WMR intervention after a 6-month follow-up.

Both groups received two booster career workshops at different scheduled follow-up periods.
